

HOBBY KING PARAMOTOR WIRING BOX

I'd tried to use the mixing program of my Spektrum Dx7 to get the course for the HK paramotor servos. It was impossible, so i've ordered from HACKER gmbh a paramix. With the receiver, the servos and the paramix i get a lot of wires.

So i made a box to enter all these leads. 3D printed with a PLA prototype and after, a PETG box and door.

You can find the .stl on Thingiverse: HOBBY KING PARAMOTOR BOX

HOBBY KING :

Receiver, paramix, and servos wirings
waiting for a home.
Fixing the box needed longer screws.
I changed other screws to insert washers...

The box is filled...

... and closed

HAPPY FLIGHTS !
